

10/644,206

PATENT

AMENDMENT B (RESPONSE TO PAPER NO. 20050708
(OFFICE ACTION DATED JULY 15, 2005))

CLAIMS

1. *(CURRENTLY AMENDED)* An apparatus including an automated X-ray imaging system for producing a plurality of X-ray imaging signals, comprising:

an X-ray emission system responsive to at least one emission control signal by providing at least first and second doses of X-ray radiation, wherein said second dose differs from said first dose in one or more of a plurality of X-ray radiation characteristics, and said first and second doses are at least partially non-contemporaneous;

an X-ray detection system responsive to at least one detection control signal and for placement in relation to said X-ray emission system to be responsive to at least a portion of said first and second doses of X-ray radiation following exposure thereto of a portion of a subject disposed substantially between said X-ray emission and detection systems by providing corresponding first and second image signals, wherein said first and second image signals correspond to said portion and a sub-portion of said subject, respectively, and said sub-portion is contained at least in part within said portion; and

a control system, coupled to said X-ray emission and detection systems, responsive to said first and second image signals by providing said emission and detection control signals, wherein said second image signal differs from said first image signal in one or more of a plurality of image characteristics.

2. *(ORIGINAL)* The apparatus of claim 1, wherein said one or more of a plurality of X-ray radiation characteristics comprises at least one of intensity, focal spot and collimation.

Atty. Docket No.: 03-015-US (10101.03.0150) - 2 -
CHICAGO/#1445878.2

10/644,206

PATENT

AMENDMENT B (RESPONSE TO PAPER NO. 20050708
(OFFICE ACTION DATED JULY 15, 2005))

3. *(ORIGINAL)* The apparatus of claim 1, wherein said one or more of a plurality of image characteristics comprises image resolution.

4. *(ORIGINAL)* The apparatus of claim 1, wherein:
said one or more of a plurality of X-ray radiation characteristics comprises at least one of intensity, focal spot and collimation; and
said one or more of a plurality of image characteristics comprises image resolution.

5. *(PREVIOUSLY PRESENTED)* The apparatus of claim 1, wherein:
said subject portion defines a target region for said at least a portion of said first and second doses of X-ray radiation;
said target region is disposed in a first spatial relation to said X-ray emission system;
said target region is disposed in a second spatial relation to said X-ray detection system; and
said X-ray emission system is further responsive to said at least one emission control signal by controlling said first spatial relation.

6. *(PREVIOUSLY PRESENTED)* The apparatus of claim 1, wherein:
said subject portion defines a target region for said at least a portion of said first and second doses of X-ray radiation;
said target region is disposed in a first spatial relation to said X-ray emission system;

Atty. Docket No.: 03-015-US (10101.03.0150) - 3 -

PATENT

AMENDMENT B (RESPONSE TO PAPER NO. 20050708
(OFFICE ACTION DATED JULY 15, 2005))

 said target region is disposed in a second spatial relation to said X-ray detection system; and

 said X-ray detection system is further responsive to said at least one detection control signal by controlling said second spatial relation.

7. (*PREVIOUSLY PRESENTED*) The apparatus of claim 1, wherein:

 said subject portion defines a target region for said at least a portion of said first and second doses of X-ray radiation;

 said target region is disposed in a first spatial relation to said X-ray emission system;

 said target region is disposed in a second spatial relation to said X-ray detection system;

 said X-ray emission system is further responsive to said at least one emission control signal by controlling said first spatial relation; and

 said X-ray detection system is further responsive to said at least one detection control signal by controlling said second spatial relation.

8. (*ORIGINAL*) The apparatus of claim 1, wherein said X-ray emission system comprises:

 an X-ray source responsive to a first portion of said at least one emission control signal by providing X-ray radiation with at least one of said plurality of X-ray radiation characteristics corresponding to said first portion of said at least one emission control signal; and

 a collimator coupled to said X-ray source and responsive to a second portion of said at least one emission control signal by conveying said X-ray radiation with at

AMENDMENT B (RESPONSE TO PAPER NO. 20050708
(OFFICE ACTION DATED JULY 15, 2005))

least another of said plurality of X-ray radiation characteristics corresponding to said second portion of said at least one emission control signal.

9. *(ORIGINAL)* The apparatus of claim 1, wherein said X-ray detection system comprises detection circuitry responsive to a first portion of said at least one detection control signal and said respective portions of said first and second doses of X-ray radiation by providing a plurality of pixel signals.

10. *(ORIGINAL)* The apparatus of claim 9, wherein said X-ray detection system further comprises processing circuitry coupled to said detector circuitry and responsive to a second portion of said at least one detection control signal and said plurality of pixel signals by providing said first and second image signals.

11. *(ORIGINAL)* The apparatus of claim 1, wherein said control system comprises:

receiving circuitry responsive to said first and second image signals by storing a corresponding plurality of image data;

processing circuitry, coupled to said receiving circuitry, to selectively process said plurality of stored image data and a plurality of reference data and in response thereto provide a plurality of control data; and

control circuitry coupled to said processing circuitry and responsive to said plurality of control data by providing said emission and detection control signals.

12. *(ORIGINAL)* The apparatus of claim 11, wherein said receiving circuitry comprises data memory circuitry.

10/644,206

PATENTAMENDMENT B (RESPONSE TO PAPER NO. 20050708
(OFFICE ACTION DATED JULY 15, 2005))

plurality of X-ray imaging signals corresponding to selected views of a subject with selectively variable image resolutions, comprising:

receiving at least one emission control signal;

generating, in response to said at least one emission control signal, at least first and second doses of X-ray radiation, wherein said second dose differs from said first dose in one or more of a plurality of X-ray radiation characteristics, and said first and second doses are at least partially non-contemporaneous;

receiving at least a portion of said first and second doses of X-ray radiation following exposure thereto of a portion of a subject;

receiving at least one detection control signal;

generating, in response to said at least one detection control signal and said at least a portion of said first and second doses of X-ray radiation, first and second image signals, wherein said first and second image signals correspond to said portion and a sub-portion of said subject, respectively, and said sub-portion is contained at least in part within said portion;

processing said first and second image signals; and

generating, in response to said processed first and second image signals, said emission and detection control signals, wherein said second image signal differs from said first image signal in one or more of a plurality of image characteristics.

19. (*ORIGINAL*) The method of claim 18, wherein said one or more of a plurality of X-ray radiation characteristics comprises at least one of intensity, focal spot and collimation.

20. (*ORIGINAL*) The method of claim 18, wherein said one or more of a

plurality of image characteristics comprises image resolution.

21. *(ORIGINAL)* The method of claim 18, wherein
said one or more of a plurality of X-ray radiation characteristics comprises at
least one of intensity, focal spot and collimation; and
said one or more of a plurality of image characteristics comprises image
resolution.

22. *(PREVIOUSLY PRESENTED)* The method of claim 18, wherein:
said generating, in response to said at least one emission control signal, at least
first and second doses of X-ray radiation comprises generating with an X-ray emission
system, in response to said at least one emission control signal, at least first and
second doses of X-ray radiation;
said receiving at least a portion of said first and second doses of X-ray
radiation following exposure thereto of a portion of a subject comprises receiving with
an X-ray detection system at least a portion of said first and second doses of X-ray
radiation following exposure thereto of a portion of a subject disposed substantially
between said X-ray emission and detection systems;
said subject portion defines a target region for said at least a portion of said
first and second doses of X-ray radiation; and
said method further comprises
disposing said target region in a first spatial relation to said X-ray
emission system,
disposing said target region in a second spatial relation to said X-ray
detection system, and

controlling said first spatial relation in further response to said at least one emission control signal.

23. *(PREVIOUSLY PRESENTED)* The method of claim 18, wherein:

 said generating, in response to said at least one emission control signal, at least first and second doses of X-ray radiation comprises generating with an X-ray emission system, in response to said at least one emission control signal, at least first and second doses of X-ray radiation;

 said receiving at least a portion of said first and second doses of X-ray radiation following exposure thereto of a portion of a subject comprises receiving with an X-ray detection system at least a portion of said first and second doses of X-ray radiation following exposure thereto of a portion of a subject disposed substantially between said X-ray emission and detection systems;

 said subject portion defines a target region for said at least a portion of said first and second doses of X-ray radiation; and

 said method further comprises

 disposing said target region in a first spatial relation to said X-ray emission system,

 disposing said target region in a second spatial relation to said X-ray detection system, and

 controlling said second spatial relation in further response to said at least one detection control signal.

24. *(PREVIOUSLY PRESENTED)* The method of claim 18, wherein:

 said generating, in response to said at least one emission control signal, at least

first and second doses of X-ray radiation comprises generating with an X-ray emission system, in response to said at least one emission control signal, at least first and second doses of X-ray radiation;

 said receiving at least a portion of said first and second doses of X-ray radiation following exposure thereto of a portion of a subject comprises receiving with an X-ray detection system at least a portion of said first and second doses of X-ray radiation following exposure thereto of a portion of a subject disposed substantially between said X-ray emission and detection systems;

 said subject portion defines a target region for said at least a portion of said first and second doses of X-ray radiation; and

 said method further comprises

 disposing said target region in a first spatial relation to said X-ray emission system,

 disposing said target region in a second spatial relation to said X-ray detection system,

 controlling said first spatial relation in further response to said at least one emission control signal, and

 controlling said second spatial relation in further response to said at least one detection control signal.

25. *(ORIGINAL)* The method of claim 18, wherein said generating, in response to said at least one emission control signal, at least first and second doses of X-ray radiation comprises:

 generating, in response to a first portion of said at least one emission control signal, X-ray radiation with at least one of said plurality of X-ray radiation

PATENTAMENDMENT B (RESPONSE TO PAPER NO. 20050708
(OFFICE ACTION DATED JULY 15, 2005))

60. *(PREVIOUSLY PRESENTED)* The method of claim 59, wherein said generating, in response to said at least one detection control signal and said at least a portion of said first and second doses of X-ray radiation, first and second pluralities of image signals comprises generating, in response to a first portion of said at least one detection control signal, a plurality of pixel signals.

61. *(PREVIOUSLY PRESENTED)* The method of claim 60, wherein said generating, in response to said at least one detection control signal and said at least a portion of said first and second doses of X-ray radiation, first and second pluralities of image signals further comprises processing said plurality of pixel signals to generate said first and second pluralities of image signals.

62. *(PREVIOUSLY PRESENTED)* The method of claim 52, wherein said generating, in response to said processed first and second pluralities of image signals, said emission and detection control signals comprises storing a plurality of image data corresponding to said first and second pluralities of image signals.

63. *(PREVIOUSLY PRESENTED)* The method of claim 62, wherein said generating, in response to said processed first and second pluralities of image signals, said emission and detection control signals further comprises processing said plurality of stored image data and a plurality of reference data and in response thereto generating a plurality of control data.

64. *(PREVIOUSLY PRESENTED)* The method of claim 63, wherein said generating, in response to said processed first and second pluralities of image signals,

said emission and detection control signals further comprises generating, in response to said plurality of control data, said emission and detection control signals.

65. *(PREVIOUSLY PRESENTED)* The method of claim 52, wherein said generating, in response to said processed first and second pluralities of image signals, said emission and detection control signals comprises generating at least one signal for controlling at least one of a plurality of parameters for said generating of said at least first and second doses of X-ray radiation.

66. *(PREVIOUSLY PRESENTED)* The method of claim 65, wherein said at least one of a plurality of parameters for said generating of said at least first and second doses of X-ray radiation comprises at least one of a voltage, a current, a focal spot and collimation.

67. *(PREVIOUSLY PRESENTED)* The method of claim 52, wherein said generating, in response to said processed first and second pluralities of image signals, said emission and detection control signals comprises generating at least one signal for controlling at least one of a plurality of parameters for said generating of said first and second pluralities of image signals.

68. *(PREVIOUSLY PRESENTED)* The method of claim 67, wherein said at least one of a plurality of parameters for said generating of said first and second pluralities of image signals comprises at least one of bias and dynamic range.
